2018

# AMOLED Manufacturing Process Report

- The report analyzes the structure and manufacturing process by dividing AMOLED into small & medium-sized rigid OLED, small & medium-sized flexible OLED and large-area rigid OLED with \* 6 chapters. In addition, by describing the latest processes of Samsung Display and LG Display, it aims to help our customers to understand the latest process and analyze future development direction.

\*1) AMOLED Structure

- 2) AMOLED Panel Manufacturing Process
- 3) Inspection Process for Small and Medium sized AMOLED Panel
- 4) Samsung Display's 9 mask LTPS TFT Manufacturing process
- 5) Samsung Display's 13 mask LTPS TFT Manufacturing process
- 6) LG Display's Oxide TFT Manufacturing process

- For further details of the supply chain, emitting materials and market track, it is recommendable to refer to the reports \*\* mentioned below.

\*\*1) Supply Chain Analysis

- 2) Emitting Material Industry
- 3) Material & Component Industry
- 4) Manufacturing and Inspection Equipment Industry
- 5) Market Track

The figure consists of 12 sub-diagrams arranged in a 4x3 grid, detailing various stages of AMOLED manufacturing:

- 1. AMOLED Structure (1.1, 1.6):** Shows substrate types (rigid vs. flexible) and touch screen panel classifications (rigid vs. flexible).
- 2. AMOLED Panel Manufacturing Process (2.1, 2.3):** Details the substrate preparation and pixel deposition processes for flexible OLED.
- 3. Inspection Process for Small and Medium sized AMOLED Panel (3.1, 3.2, 3.3):** Illustrates the inspection steps and equipment used for TFT patterns and signal line defects.
- 4. Samsung Display's 9 mask LTPS TFT Manufacturing process (4.2):** Shows the process flow for LTPS TFT manufacturing, including gate insulator patterning.
- 6. LG Display's Oxide TFT Manufacturing process (6.3):** Shows the process flow for Oxide TFT manufacturing, including gate insulator patterning.

<b>1. AMOLED Structure</b>	<b>04</b>

4.10 Pixel Define Layer	
4.11 General	

**5. Samsung Display's 13 mask LTPS TFT Manufacturing process ----- 121**

- 5.1 Buffer Layer and Active Layer
- 5.2 Gate Electrode 1
- 5.3 Gate Electrode 2
- 5.4 Interlayer 1
- 5.5 Deep hole 1
- 5.6 Source / Drain Electrode 1
- 5.7 Interlayer 2
- 5.8 Deep hole 2
- 5.9 Source / Drain Electrode 2
- 5.10 Passivation layer
- 5.11 Planarization layer
- 5.12 Pixel Electrode
- 5.13 Pixel Define Layer
- 5.14 General

**6. LG Display's Oxide TFT Manufacturing process ----- 151**

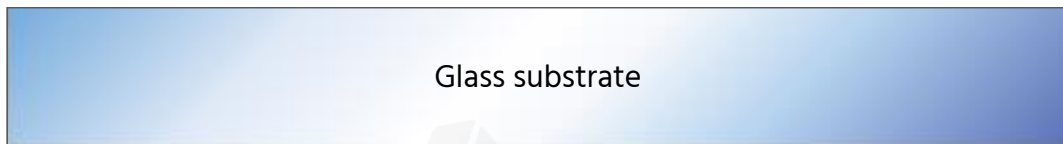

- 6.1 Light Shield Layer
- 6.2 Buffer Layer and Active Layer
- 6.3 Gate Insulator
- 6.4 Gate Electrode
- 6.5 Interlayer
- 6.6 Source / Drain Electrode
- 6.7 Planarization layer and Color filter
- 6.8 Pixel Electrode
- 6.9 Pixel Define Layer
- 6.10 General

# 1. AMOLED Structure

## 1.1 Substrate

- Glass substrates are used for rigid OLED substrates.
- For flexible OLED, polyimide (PI) with high heat resistance and low thermal expansion coefficient is used since TFT is formed by high-temperature physical and chemical process on top of the substrate.
- The PI substrate is a structure in which PI and SiNx are stacked twice and SiOx is formed on the upper side of SiNx.

### Glass substrate for Rigid OLED and PI substrate for flexible OLED

(a) Glass substrate for Rigid OLED

(b) PI substrate for flexible OLED

# 1. AMOLED Structure

## 1.6 Touch Screen Panel

### TSP classification

- There are two types of TSP structure: One is \* add-on structure in which a film-type touch screen is attached on the encapsulation. The other is \* On-cell structure directly formed on the encapsulation.
- The touch screen of the add-on structure and the on-cell structure has an insulator between the touch electrode formed in the x-axis and the y-axis. The add-on method requires a separate base film such as PET.
- On-cell structure is applied to Rigid OLED. For flexible OLED, add-on structure or on-cell structure is applied.
- LG Display is developing new structured TSP to flexible OLED with touch electrode formed on the gas barrier film of hybrid encapsulation.

### TSP(touch screen panel) classification

(a) Rigid OLED - Frit glass encapsulation  
- On-cell type

(b) Rigid OLED - TFE - On-cell type

(c) Flexible OLED - TFE - On-cell type

(d) Flexible OLED - TFE - add-on type

(e) Flexible OLED - Hybrid encapsulation  
- LG Display's TSP structure

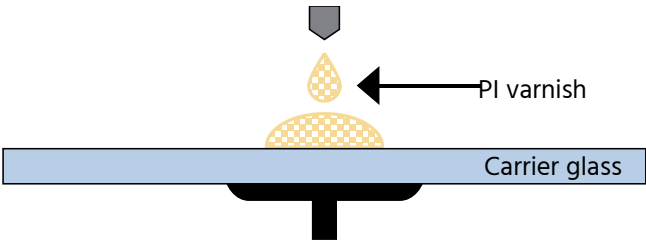

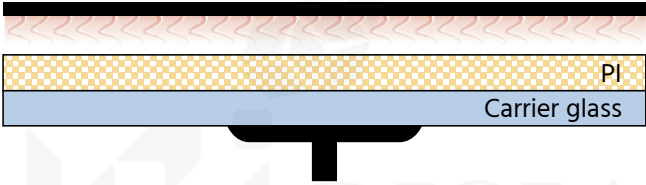

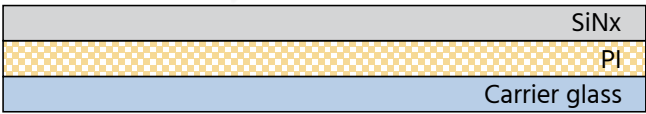

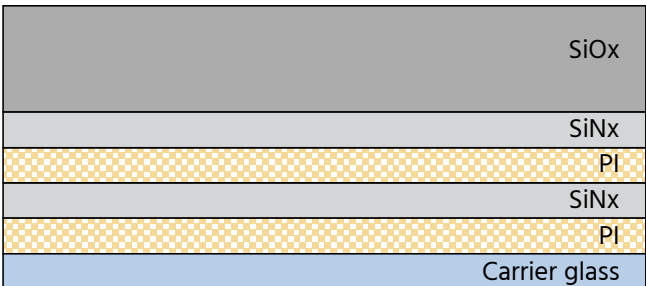

## 2. AMOLED Panel Manufacturing Process

### 2.1 Substrate

#### PI structure for flexible OLED

- Substrate for flexible OLED is first coated with PI varnish on top of the carrier glass and thermally cured.
- SiNx is deposited on the upper side of the cured PI film.
- OLED is a three stack structure of WOLED + color filter type.
- PI varnish coating, the thermal curing process, and the SiNx deposition process are repeated on the SiNx/PI, and then the SiOx is deposited thereon to complete the substrate production.

Manufacturing process of substrate for flexible OLED

Structure	Process
	 <p>PI varnish</p> <p>Carrier glass</p> <p>PI coating</p>
Substrate	 <p>PI</p> <p>Carrier glass</p> <p>PI curing</p>
	 <p>SiNx</p> <p>PI</p> <p>Carrier glass</p> <p>SiNx deposition</p>
	 <p>SiOx</p> <p>SiNx</p> <p>PI</p> <p>SiNx</p> <p>PI</p> <p>Carrier glass</p> <p>SiOx deposition</p>

X 2

\* Substrate structure may vary by panel makers.

## 2. AMOLED Panel Manufacturing Process

### 2.3 OLED Pixel

#### RGB OLED

RGB OLED pixel deposition process and equipment

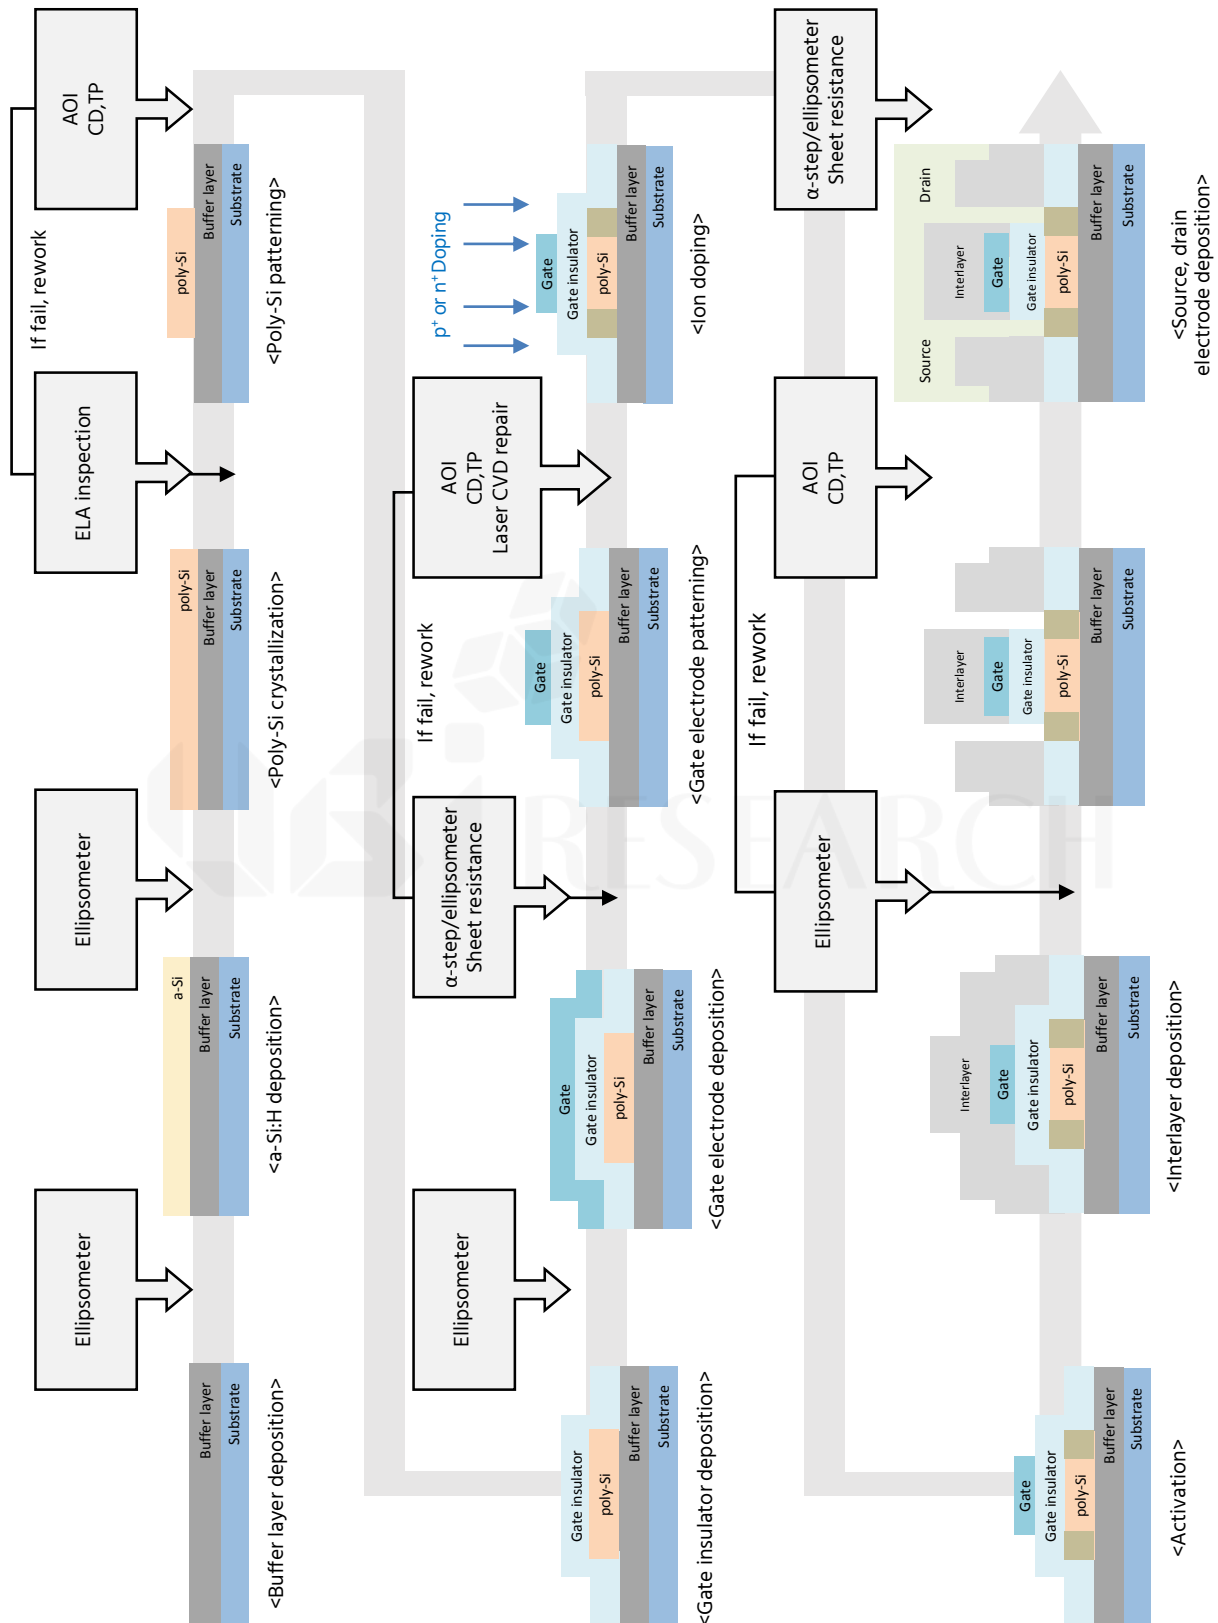

Process	Equipment
O <sub>2</sub> or N <sub>2</sub> plasma treat	Plasma asher
HIL deposition	Evaporator (open mask)
HTL deposition	Evaporator (open mask)
Red OLED deposition	Evaporator (FMM)
Green OLED deposition	Evaporator (FMM)

# 3. Inspection Process for Small and Medium sized AMOLED Panel

## 3.2 TFT

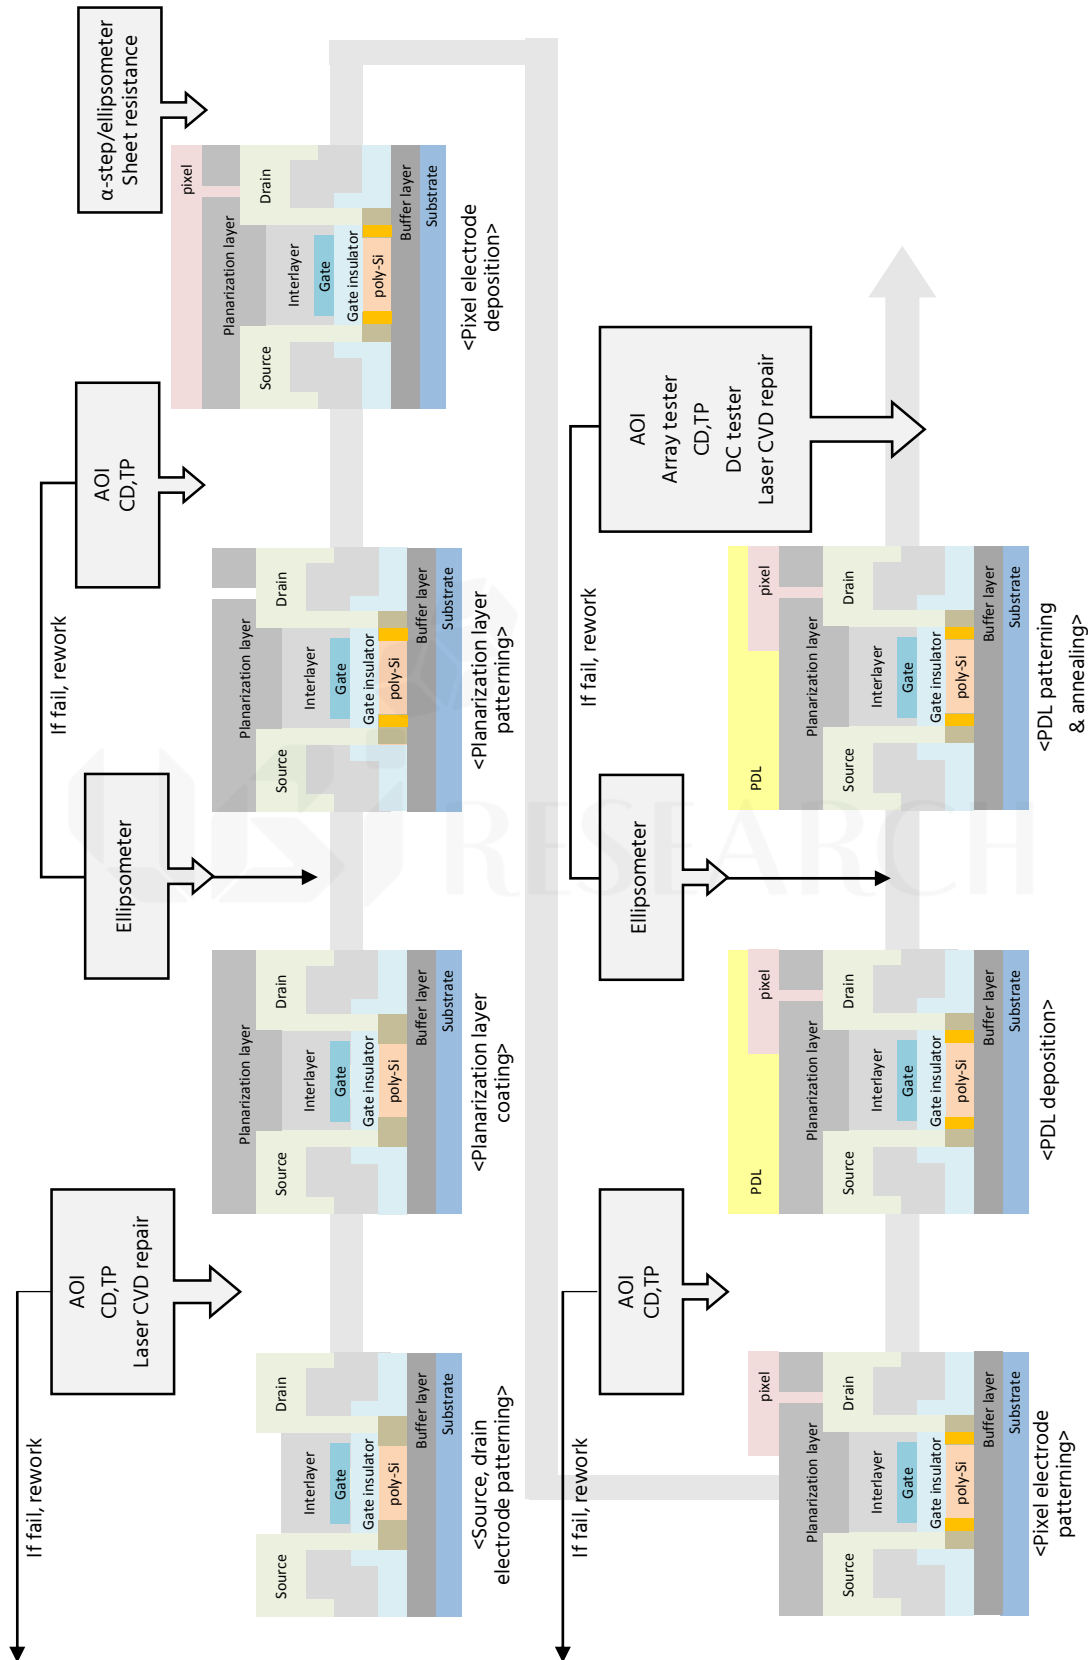

- During TFT process,  $\alpha$ -step and ellipsometer are used to measure the thickness, AOI equipment to inspect the pattern, and laser CVD equipment to repair the TFT by detecting defects of signal line, respectively.

# 3. Inspection Process for Small and Medium sized AMOLED Panel

## 3.2 TFT

- After completion of the TFT process, there are AOI equipment for pattern inspection, array tester and DC tester for electrically checking the abnormality of the signal line, and laser CVD repair for repairing the signal line.

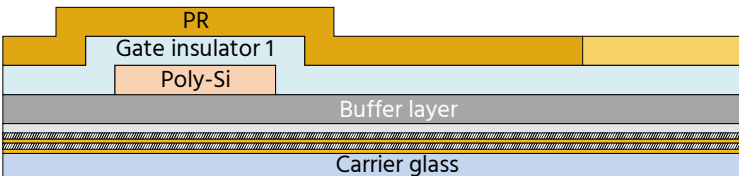

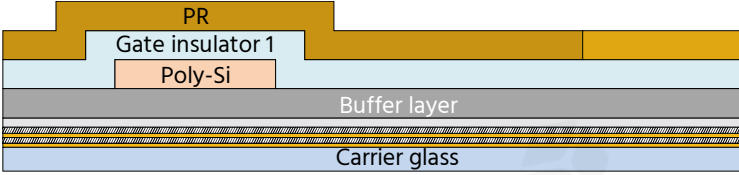

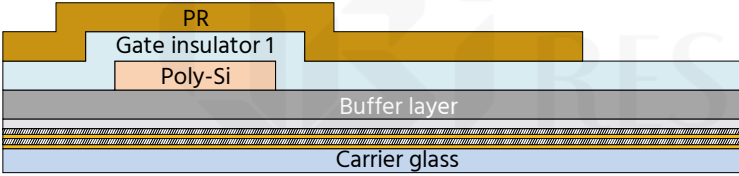

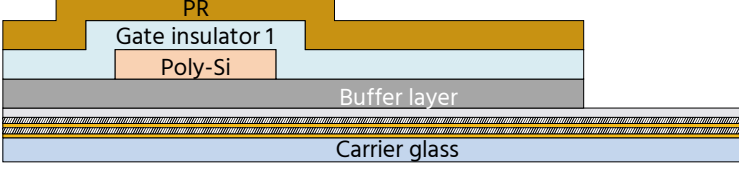

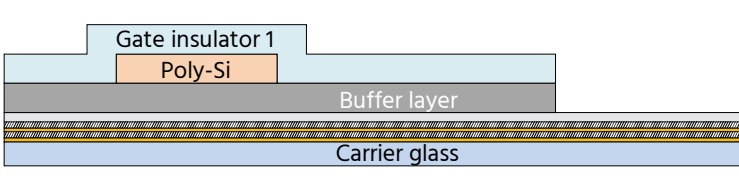

# 4. Samsung Display's 9 mask LTPS TFT Manufacturing process

## 4.2 Gate Insulator 1

- Deep hole 1 patterning (mask #2)

LTPS TFT manufacturing process and equipment

Process	Materials	Equipment
	-	Aligner
	-	Oven
	TMAH	Developer
	Reactive gas(CF <sub>4</sub> , C <sub>4</sub> F <sub>4</sub> , CHF <sub>4</sub> )	Dry etcher
	Triethanol-amine	Stripper

# 6. LG Display's Oxide TFT Manufacturing process

## 6.3 Gate Insulator

- Gate insulator patterning (mask #3)

Oxide TFT manufacturing process and equipment

Process	Materials	Equipment
	-	Aligner
	-	Oven
	TMAH	Developer
	Wet chemical	Wet etcher
	N-Methyl Pyrrolidone (NMP)	Stripper
